DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11, 15-30, 34-36, 58, 60, 61, and 63 are rejected under 35 U.S.C. 102(b) as being anticipated by Laux et al. (5,827,259).

Laux discloses an absorbent pad 48 comprising a single layer, as shown in figure 2. The absorbent pad 48 comprises between 30% and 85% superabsorbent material homogeneously mixed with between 15% and 70% pulp fluff, as disclosed in column 19, lines 50-65. The absorbent pad 48 has a density greater than about 0.28 g/cc, as disclosed in column 20, lines 1 and 15-17, and a thickness of less than 5 mm, as disclosed in column 20, lines 9-13. The absorbent pad 48 is subjected to pressure, as disclosed in column 20, lines 13-14, and therefore is densified. The absorbent pad 48 has an absorbent capacity of between about 14 and 40 g/g, as disclosed in column 19, lines 27-31. Since the absorbent pad 48 disclosed by Laux is comprised of the same materials as the claimed invention, and has the same density, thickness, and absorbent capacity, it is inherent that the edge compression of the absorbent pad 48 will be the same as the claimed invention. Laux therefore discloses an absorbent pad that fulfills all limitations of the claim.

With respect to claims 2 and 3, the absorbent pad 48 has a density greater than about 0.32 g/cc, as disclosed in column 20, lines 1 and 15-17.

Art Unit: 3761

With respect to claims 4 and 5, the absorbent pad comprises between 40% and 80%, and between 50% and 75% superabsorbent material, as disclosed in column 19, lines 50-65.

With respect to claim 6, the absorbent pad 48 further comprises a plurality of man-made fibers, as disclosed in column 18, lines 26-28.

With respect to claim 7, the absorbent pad 48 further comprises carrier particles, as disclosed in column 18, lines 26-28.

With respect to claims 8 and 9, the absorbent pad 48 is less than 5 mm thick, which includes the ranges of between 0.6 and 2.5 mm, and 0.7 and 2.0 mm.

With respect to claims 10 and 11, the absorbent pad 48 has an absorbent capacity of at least 16 g/g, as disclosed in column 19, lines 27-31.

With respect to claims 15-20, the absorbent pad 48 is present in an absorbent article, diaper, training pant, feminine hygiene product, incontinence product, and is capable of being used as a swim garment, as disclosed in column 2, lines 48-60.

With respect to claim 21, the absorbent material forms a gradient within the absorbent pad 48, as disclosed in column 18, lines 5-7.

With respect to claims 22 and 23, the absorbent pad comprises between 40% and 80%, and between 50% and 75% superabsorbent material, as disclosed in column 19, lines 50-65.

With respect to claim 24, the absorbent pad 48 further comprises a plurality of man-made fibers, as disclosed in column 18, lines 26-28.

Art Unit: 3761

With respect to claim 25, the absorbent pad 48 further comprises carrier particles, as disclosed in column 18, lines 26-28.

With respect to claims 26 and 27, the absorbent pad 48 is less than 5 mm thick, which includes the ranges of between 0.6 and 2.5 mm, and 0.7 and 2.0 mm.

With respect to claims 28-30 the absorbent pad 48 has an absorbent capacity of between 14 and 40 g/g, and at least 16 g/g, as disclosed in column 19, lines 27-31.

With respect to claim 34, the absorbent pad 48 includes more superabsorbent material at a first end than at a second end, as disclosed in column 20, lines 42-44.

With respect to claim 35, the absorbent pad 48 includes more superabsorbent material along a top surface, as disclosed in U.S. Patent 4,699,823 and incorporated by reference in column 18, lines 13-16.

With respect to claim 36, the absorbent pad 48 includes more superabsorbent material along a bottom surface, as disclosed in column 18, lines 8-13.

With respect to claim 58, the absorbent pad 48 is encompassed by a wrap sheet 70.

With respect to claim 60, the absorbent pad 48 is formed in a specific shape, as shown in figure 1.

With respect to claim 61, the absorbent pad 48 is encompassed by a wrap sheet 70.

Art Unit: 3761

With respect to claim 63, the absorbent pad 48 is formed in a specific shape, as shown in figure 1.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12-14 and 31-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laux et al. (5,827,259) as applied to claims 1 and 21 above, and further in view of Coles (5,722,967).

Laux discloses all aspects of the claimed invention but remains silent as to the gel strength of the superabsorbent material.

Coles discloses a superabsorbent material for use in an absorbent pad having a gel strength of at least 0.85, as described in column 7, lines 6-9. Superabsorbent materials having a high gel strength are well-known to be highly stable. It would therefore be obvious to one of ordinary skill in the art at the time of invention for the superabsorbent material of Laux to have a gel strength of at least 0.85, as taught by Coles.

Claims 37-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laux et al. (5,827,259) as applied to claim 21 above.

Laux discloses all aspects of the claimed invention but remains silent as to the variation of concentration of the superabsorbent material. It would have been

Art Unit: 3761

obvious to one of ordinary skill in the art at the time of invention to vary the concentration of superabsorbent by about 0.15 to about 0.25 g/cc, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

Claim 57 is rejected under 35 U.S.C. 103(a) as being unpatentable over Laux et al. (5,827,259) as applied to claim 1 above, and further in view of Pieniak et al. (5,451,442).

Laux discloses all aspects of the claimed invention with the exception of the absorbent pad having a higher basis weight in a first zone than in a second zone.

Pieniak discloses an absorbent pad 14, as shown in figure 4, comprising compressions 40. The absorbent pad 14 has a reduced thickness and basis weight at compressions 40, as disclosed in column 7, lines 38-39. The compressions 40 act as folding lines to provide the article with an improved and more comfortable fit, as disclosed in column 10, lines 57-65.

It would therefore be obvious to one of ordinary skill in the art at the time of invention to construct the absorbent pad of Laux with the compressions of Pieniak to provide the article with an improved and more comfortable fit.

Response to Arguments

In response to the applicant's argument that Laux fails to disclose a densified absorbent pad, it is noted that the instant claim does not further limit the amount of densification. The absorbent pad of Laux was subjected to

Art Unit: 3761

compression, and therefore fulfills the definition of densified. The absorbent pad further fulfills all other claimed limitations, as described in the rejection under 35 U.S.C. 102(b) above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,068,620 discloses a densified absorbent pad comprising superabsorbent and fluff pulp.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. Lynne Anderson whose telephone number is (703) 306-5716. The examiner can normally be reached on Monday through Friday.

Art Unit: 3761

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Schwartz can be reached on (703) 308-1412. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
